

Welcome to **AskCody®**

Where's that room again?

**Where's my meeting? Who are coming today?
Who are they visiting? Which meeting are they
attending? Which visitors are currently
in the building? Which meeting
room is available?**

?

It's all about offering the right information at the right time and place. It's about making it easy and intuitive to find your way, by using value adding technology that blends seamlessly with existing wayshowing artefacts and principles. It's about using smart solutions to improve visitor, staff and tenant satisfaction, as well as enhancing productivity and reducing company costs.

AskCody® provides indoor navigation solutions for large buildings and campuses, resource booking as well as visitor management solutions that create a unique setting, offering the best possible user experience in a flexible and dynamic indoor environment.

We bring order to wayfinding, resource booking and visitor management complexities. We optionally enable necessary functionality and information when demanded or are able to filter this out when not.

We're a total supplier of digital wayshowing and information solutions and through close cooperation with the signage industry, IT Integrators and AV-companies we're focusing on creating digital wayfinding and information solutions that supplement existing static signage and wayfinding principles.

We're a Danish company with more than 20 years of practical and theoretical experience in solving the challenges related to wayfinding at hospitals, educational institutions, public buildings, and other large campuses.

Our goal is to create a great visitor and wayfinding experience as well as enhancing company resource utilization. We provide the individual user with a comfortable and trustworthy solution when navigating an unfamiliar environment, allowing the user to feel confident on their way to their destination, whether it is by using the smartphone based AskCody WayFinder or by our range of dynamic signage solutions.

We make room scheduling and utilization effective and efficient, and make it easy to refocus front desk resources, improve meeting room efficiency and visitor management.
